## Summary (as of 01/03/2022, 10:00 AM)

- **Confirmed cases**
  - **Total** 1,213.0 cases/100,000 population.
  - **Hospitalised** (all age groups) 5.93 cases/100,000 population.
  - **Deaths** 12.40 cases/100,000 population.

- **Vaccination monitoring**
  - **1st vaccination**: +7,415
  - **2nd vaccination**: +16,927
  - **Booster vaccination**: +48,728

- **Hospitalised aged 60 years +** 12.40 cases/100,000 population.

- **Deaths** 12.40 cases/100,000 population.

- **Deaths** +235, (122,937) cases/100,000 population.

- **No. of new cases in ICU compared to the previous day** +165.

- **% of COVID-19 occupancy in total number of operable beds** 10.2%.

- **No. of vaccinations reported in last 24h** 1,622.

- **No. of districts with 7-di > 500/100,000 pop.** 5.93.

- **No. of districts with 7-di > 50/100,000 pop.** 12.40.

- **No. of districts with 7-di > 1000/100,000 pop.** 12.40.

- **% of COVID-19 cases associated with ICU** 10.2%.

- **No. of new cases in ICU compared to the previous day** +165.

- **Share of population fully vaccinated against COVID-19** N1: 76.3 %, N2: 75.4 %, N3: 57.0 %.

- Numbers in () brackets show cumulative values, numbers in [] brackets show current values. Footnotes can be found in the Annex.

---

- Changes since the last report are marked blue in the text.

---

COVID-19 cases are notified to the local public health authorities in the respective districts, in accordance with the German Protection against Infection Act (IfSG). The data are further transmitted through the respective federal state health authority to the Robert Koch Institute (RKI). This situation report presents the uniformly recorded nationwide data on laboratory-confirmed COVID-19 cases transmitted to RKI.

COVID-19 situation report as of 01/03/2022

Epidemiological Situation in Germany (as of 01/03/2022, 0:00 AM)

Since January 2020, a total of 14,867,218 (+122,111) laboratory-confirmed cases of COVID-19 have been reported to and validated by the RKI (Table 1). The geographical distribution of cases of the last 7 days is shown in Figure 1. Please see the COVID-19 dashboard (https://corona.rki.de/) for information on the number of COVID-19 cases by county (local health authority).

Figure 1: Number and cumulative incidence (per 100,000 population) of reported COVID-19 cases in Germany by county and federal state (n=1,008,683, 01/03/2022, 12:00 AM). Cases are usually reported according to the district from which they were transmitted. This usually corresponds to the place of residence. Place of residence and probable place of infection do not have to coincide.

Table 1: Number and cumulative incidence (per 100,000 population) of laboratory-confirmed COVID-19 cases, hospitalizations and deaths for each federal state electronically reported to RKI, Germany (01/03/2022, 12:00 AM). The number of new cases includes cases newly notified to the local public health authority, but also on prior days.

Figure 2 shows the course of the COVID-19 cases per 100,000 population transmitted to the RKI on the last 7 days in each of the federal states and in all of Germany. The values for the 7-day incidence in the federal states range from 1,816 per 100,000 population in Saxony-Anhalt to 548.2 per 100,000 population in Hamburg.

![COVID-19 cases/100,000 inhabitants during 7 days in Germany by federal state and reporting date in the health offices (01/03/2022, 0:00 AM). The grey area delineates a range of dates with yet incomplete data, where changes in incidence are likely to occur.](image)

**Estimation of the reproduction number (R), taking into account the reporting delay (Nowcasting)**

Figure 3 shows the course of estimated 7-day R-value.

**Figure 3: Estimated 7-day R-value (in orange) over the last 60 days, against the background of estimated number of COVID-19 cases according to illness onset (as of 01/03/2022, 12 AM, taking into account cases up to 25/02/2022).**

The R-value is statistically significantly below 1, indicating a falling trend in case numbers.

**Annex:**

**Notes on data collection and evaluation**

The data presented in this situation report represent a temporal snapshot. Information on individual cases can be obtained and added by the health authorities in the course of the disease. It is not possible to obtain complete data for all variables.

If necessary, the local public health authorities collect additional information, evaluate reported cases and initiate the necessary infection control measures. In accordance with the Infection Protection Act, the data are transmitted electronically by the local public health authorities to the federal state health authority and from there to the RKI on the next working day at the latest. The data is updated at the RKI daily at 0:00 AM.

Data entry and data transmission can lead to a time lag from the time the case is reported to the local public health authorities until publication by the RKI, so case numbers may deviate from those from other sources.

For the calculation of the incidences, the data of the population statistics of the Federal Statistical Office from 31.12.2020 are used. The calculation of the 7-day incidence is based on the reporting date, i.e. the date on which the local public health authorities became aware of the case and recorded it electronically. For the 7-day incidence, the cases reported on the last 7 days are counted.

On the other hand, the number of cases since the previous day, as shown in the situation report and dashboard, is tied to the date when the case is first published in the RKI's reporting. Thus, due to transmission delays, it may occur that cases with a reporting date more than 7 days ago are still included in the situation report. At the same time, the number of cases since the previous day also may contain cases that were subsequently deleted in data quality checks. Thus, the 7-day incidence cannot be readily calculated from these single-day incidences.

**Notes**

1. The number of cases since the previous day refers to the date of receipt at the RKI; due to the delay in transmission, cases from previous days may be included.
2. The number of active cases results from the number of transmitted cases minus the deaths and the estimated number of recovered cases.
3. The algorithm for estimating the number of people who have recovered assumes an average duration of illness from onset or hospitalization date on. The true length of symptomatic illness and/or sequelae are usually not available in the reporting system.
4. Proportion of COVID-19 occupancy by adults out of all available adult intensive care beds.
5. The total number of persons vaccinated at least once results from the number of reports coded as first vaccination in the transmitted vaccination data.
6. According to specifications for vaccination data transmission, every second vaccination or first vaccination after recovery is to be transmitted with the code as a complete vaccination. A vaccination with the Janssen vaccine is coded and transmitted as a first vaccination, but is also counted as completed vaccination series.
7. The total number of persons with booster vaccination results from the number of reports coded as booster vaccination in the transmitted vaccination data.
