

Coronavirus Disease 2019 (COVID-19)

Daily Situation Report of the Robert Koch Institute

15/11/2020 - UPDATED STATUS FOR GERMANY

Confirmed cases		7-day incidence (7-di)		DIVI -Intensive care register
Total ¹	Active cases ²	Total population	No. of districts with 7-di > 50/100,000 pop	Cases currently in ICU
+16,947 (790,503)	+7,600 [275,700]	143 cases/ 100,000 EW	+2 [373]	+ 60 [3,385]
Recovered ³	Deaths	People ≥ 60 years	No. of districts with 7-di > 100/100,000 pop	Ended treatment; thereof deceased [%]
+9,200 (ca. 502,300)	+107 (12,485)	101 cases/ 100,000 EW	+7 [277]	+ 252 31%

Numbers in () brackets show cumulative values, numbers in [] brackets show current values.

¹ The difference to previous day relates to data entry at RKI; due to delay of data transmission former cases may be included.

² Active cases were calculated from the number of transmitted cases minus deaths and the estimated number of recovered cases.

³ The algorithm for estimation of recovered cases considers information about disease onset and hospitalization but not for late effects because such data were not recorded regularly.

COVID-19 cases are notified to the local public health department in the respective districts, in accordance with the German Protection against Infection Act (IfSG). The data are further transmitted through the respective federal state health authority to the Robert Koch Institute (RKI). This situation report presents the uniformly recorded nationwide data on laboratory-confirmed COVID-19 cases transmitted to RKI.

– Changes since the last report are marked *blue* in the text –

Summary (as of 15/11/2020, 12:00 AM)

- Currently, an increase of transmissions in the population in Germany can be observed. Therefore, the entire population is strongly encouraged to commit itself to infection prevention and control.
- The nationwide incidence over the past 7 days is **143** cases per 100,000 population.
- Since the beginning of September, the proportion of cases in older age groups has been increasing again. The 7-day incidence of people ≥ 60 years is currently **101** cases/100,000 population.
- The 7-day incidence in Bavaria, Berlin, Bremen, Hesse, North Rhine-Westphalia, Saarland and Saxony is higher than the national total 7-day incidence.
- Almost all districts have a high 7-day incidence. Only **1** district has an incidence ≤25 cases/100,000 population. In comparison, **277** districts have an incidence of >100 cases/100,000 population and of these, 21 districts have an incidence of >250 cases/100,000 population.
- The nationwide increase is caused by increasingly diffuse transmission, with numerous clusters in households, but also in community institutions, nursing and long-term care homes, as well as in occupational settings or related to religious events. For a large proportion of cases the transmission setting remains unclear.
- Since mid of October, the number of COVID-19 patients requiring intensive care, has strongly increased, from 655 patients on October 15th to **3,385** patients on **15/11/2020**.
- On **15/11/2020**, **16,947** new laboratory-confirmed COVID-19 cases and **107** new deaths associated with COVID-19 have been transmitted to the RKI in Germany.

Epidemiological Situation in Germany

In accordance with the international standards of WHO¹ and ECDC², RKI considers all laboratory confirmations of SARS-CoV-2, irrespective of the presence and severity of clinical symptoms, as COVID-19 cases. Thus, in the following report the term "COVID-19 cases" covers acute SARS-CoV-2 infections as well as cases of COVID-19 disease.

General current assessment

After a temporary stabilisation of case numbers at a higher level in late August and early September, there is currently an increase of transmission within the population in all federal states. The proportion of COVID-19 cases in older age groups is currently increasing. The reported R-values were stable well above 1 since the beginning of October. Over the past few days the R-value has been fluctuating and is currently around 1. This means that, on average, each person infected with SARS-CoV-2 infects another person. As the number of infected persons is currently very high in Germany, this means that there is still a high number of new cases every day.

The data table on page 1 was adapted on November 11. The aim of the change is to focus on the current situation primarily. Therefore, changes to the previous day are given priority. Reporting data from other surveillance systems will become more visible. In particular data on ICU capacities are of great importance in the current situation.

There are outbreaks in various districts throughout Germany, which are associated with different situations, including households and in old people's and nursing homes. In addition, in many districts there is an increasingly diffuse spread of SARS-CoV-2, without traceable transmission chains.

Currently, however, the number of illnesses among older people is on the rise again. As they more often have a severe course due to COVID-19, the number of serious cases and deaths is also increasing. These can be avoided if we prevent the spread of the SARS-CoV-2 virus with the help of infection control measures.

It is therefore still necessary for the entire population to be committed to infection prevention and control, e.g. by consistently observing rules of distance and hygiene - also outdoors -, by ventilating indoor spaces and, where indicated, by wearing a community mask correctly. Crowds of people - especially indoors - should be avoided.

Geographical distribution of cases

Epidemiological analyses are based on validated cases notified electronically to the RKI in line with the Protection Against Infection Law (Data closure: 12:00 AM daily). Since January 2020, a total of **790,503 (+16,947)** laboratory-confirmed cases of COVID-19 have been reported to and validated by the RKI (Table 1).

Table 1: Number and cumulative incidence (per 100,000 population) of laboratory-confirmed COVID-19 cases and deaths for each federal state electronically reported to RKI, Germany (15/11/2020, 12:00 AM). The number of new cases includes positive cases notified to the local health department at the same day, but also at previous days.

Federal State	Total number of cases	Number of new cases*	Cases/ 100,000 pop.	Cases in the last 7 days	7-day incidence per 100,000 pop.	Number of deaths	Number of deaths/ 100,000 pop.
Baden-Wuerttemberg	115,670	2,131	1,042	14,694	132.4	2,258	20.3
Bavaria	156,421	3,265	1,192	23,631	180.0	3,133	23.9
Berlin	47,265	831	1,288	7,584	206.7	358	9.8
Brandenburg	12,636	431	501	1,771	70.2	238	9.4
Bremen	8,153	188	1,197	1,071	157.2	94	13.8
Hamburg	19,977	527	1,081	2,274	123.1	311	16.8
Hesse	64,393	1,931	1,024	10,711	170.3	864	13.7
Mecklenburg-Western Pomerania	4,397	108	273	676	42.0	38	2.4
Lower Saxony	55,325	1,442	692	8,375	104.8	903	11.3
North Rhine-Westphalia	200,063	3,700	1,115	29,736	165.7	2,623	14.6
Rhineland-Palatinate	32,013	616	782	5,670	138.5	362	8.8
Saarland	10,110	397	1,024	1,563	158.4	214	21.7
Saxony	33,924	917	833	6,236	153.1	511	12.5
Saxony-Anhalt	8,040	99	366	1,255	57.2	105	4.8
Schleswig-Holstein	11,361	158	391	1,506	51.9	219	7.5
Thuringia	10,755	206	504	1,797	84.2	254	11.9
Total	790,503	16,947	951	118,550	142.5	12,485	15.0

Quality checks and data cleaning by the health authorities and regional offices can lead to corrections to cases previously transmitted (e.g. detection of duplicate reports). This can occasionally lead to negative values for the number of new cases.

Distribution of cases over time

The first COVID-19 cases in Germany were notified in January 2020. Figure 1 shows COVID-19 cases transmitted to RKI according to date of illness onset from 01/03/2020 onwards. Of these cases, the onset of symptoms is unknown for **415,678 cases (53%)** thus their date of reporting is provided in Figure 1.

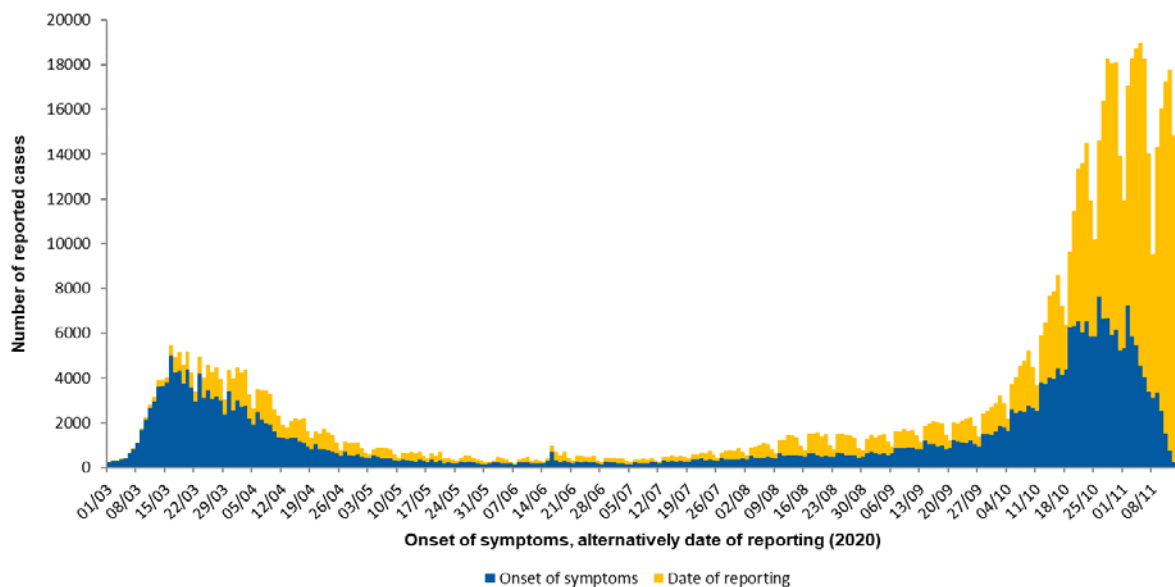

Figure 1: Number of COVID-19 cases in Germany electronically reported to the RKI by the date of symptoms onset or – if unknown – alternatively by date of reporting since 01/03/2020 (15/11/2020, 12:00 AM).

Occupation, accommodation or care in facilities

In accordance with the Protection Against Infection Act (Infektionsschutzgesetz, IfSG), the RKI receives information on occupation, accommodation or care in a facility relevant for infection control for reported COVID-19 cases.

Since information on occupation, accommodation or care in these facilities is missing in 58% of cases, the numbers of cases working, accommodated or cared for in these facilities reported here should be considered minimum values. Among the COVID-19 cases reported from the above-mentioned facilities, the proportion of cases that actually acquired their infection in these facilities is unknown.

The number of COVID-19 cases was highest among persons cared for or employed in care facilities according to § 36 IfSG, among persons employed in medical facilities according to § 23 IfSG and among persons cared for in educational facilities according to § 33 IfSG (Table 2). The number of deaths was particularly high among persons cared for in facilities according to §§ 23 and 36.

Among the cases reported as working in medical facilities (§ 23 IfSG), 74% were female and 26% male. Their median age was 40 years. The high number of cases among people cared for or working in various care facilities (§ 36 IfSG) is consistent with numerous reported outbreaks, especially in nursing homes. The high number of cases among persons working in the food sector (§ 42 IfSG) is largely due to outbreaks in meat processing plants.

Table 2: Notified COVID-19-cases according to possible occupation, accommodation or care in facilities relevant for transmission of infectious diseases according to the Protection Against Infection Act (IfSG), reported to RKI (785,980* cases, no data available for 454,723 cases; 15/11/2020, 12:00 AM)

Facility according to		Total	Hospitalised	Deaths	Recovered (estimate)
§ 23 IfSG (e.g. hospitals, outpatient clinics and practices, dialysis clinics or outpatient nursing services)	Cared for / accommodated in facility	6,381	4,075	858	4,400
	Occupation in facility	21,707	823	25	20,000
§ 33 IfSG (e.g. day care facilities, kindergartens, facilities for after school care, schools or other educational facilities, children's homes, holiday camps)	Cared for / accommodated in facility*	18,970	220	3	15,800
	Occupation in facility	9,083	276	8	7,800
§ 36 IfSG (e.g. facilities for the care of older, disabled, or other persons in need of care, homeless shelters, community facilities for asylum-seekers, repatriates and refugees as well as other mass accommodation and prisons)	Cared for / accommodated in facility	25,942	5,120	4,170	19,300
	Occupation in facility	14,602	560	47	13,400
§ 42 IfSG (e.g. meat processing plants or kitchens in the catering trade, in inns, restaurants, canteens, cafés, or other establishments with or for communal catering)	Occupation in facility	8,600	316	5	7,900
Neither cared for, accommodated in nor working in a facility		225,972	23,684	4,226	199,900

*for care according to § 33 IfSG only cases under 18 years of age are taken into account, as other information may be assumed to be incorrect. Due to changes in data registration, not all data entries for cases ascertained in the most recent version of the surveillance software could be taken into account. This will be corrected in the coming days.

Outbreaks

An increased incidence of >25 cases in 7 days/100,000 population was reported for almost every district (411 of 412). There are 21 districts in the group of the highest incidence of >250 to 500 cases/100,000 in the last 7 days. The dashboard (<https://corona.rki.de>) shows all affected districts.

In most districts the transmission is diffuse, with several cases clustering in households. Many small outbreaks in retirement and nursing homes, in hospitals and facilities for asylum seekers and refugees, and community facilities, kindergartens and schools, various occupational settings and in the context of religious gatherings continue to contribute to the increase of incidence.

Estimation of the reproduction number (R)

The reproduction number, R, is defined as the mean number of people infected by one infected person. The estimation of the R-value is based on the so-called nowcasting (Figure 2), a statistical procedure that shows the development of the number of cases after the onset of the disease and also forecasts it for the last few days. This forecast is subject to uncertainty, which is also reflected in the prediction intervals given for the R-value. After other case reports have been received at the RKI, the R-value is adjusted for the past days and, if necessary, corrected upwards or downwards. In recent weeks, values reported at the beginning of a week were typically corrected slightly upwards. They had thus slightly underestimated the real COVID-19 events in Germany. Values estimated towards the end of a week were more stable. The currently estimated course of the R-value is shown in Figure 3.

4-day R-value	7-day R-value
1.19	1.03
(95%-prediction interval: (1.01 – 1.43))	(95%- Prädiktionsintervall: 0.93 – 1.15)

Delays in reporting of case numbers at weekend days can lead to cyclical fluctuations of the 4-day R-value. The 7-day R-value is less affected because all week days are used to determine the value.

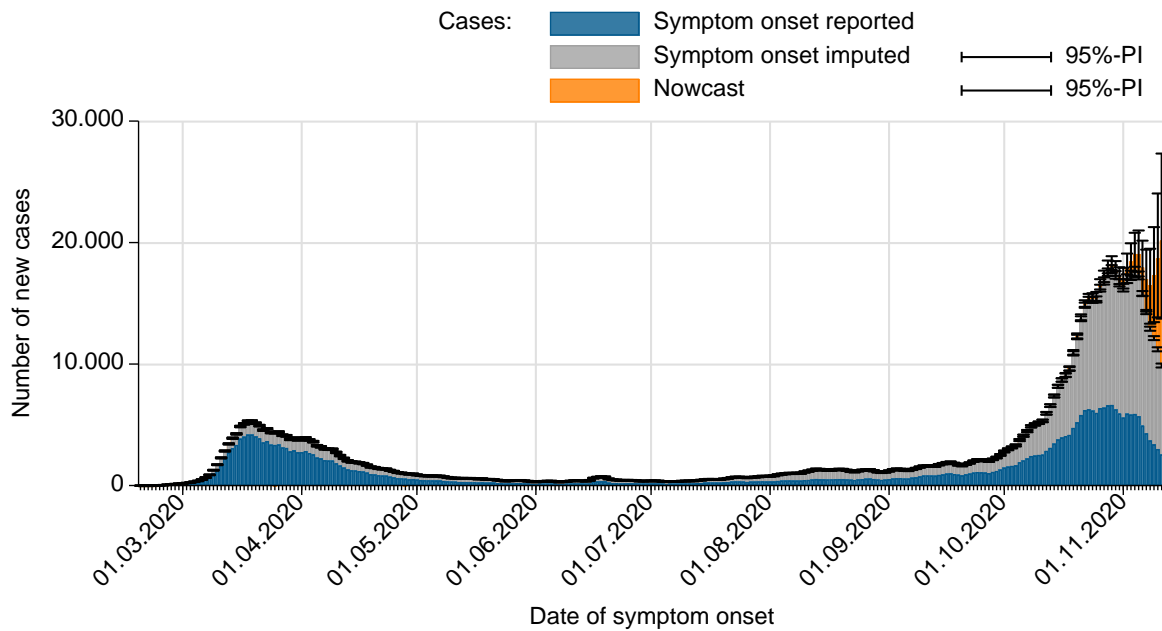

Figure 2: Number of notified COVID-19 cases with known date of illness onset (dark blue), estimated date of illness onset for cases without reported date of onset (grey) and estimated number of not yet notified cases according to illness onset electronically reported to RKI (orange) (as of 15/11/2020, 12 AM, taking into account cases up to 11/11/2020).

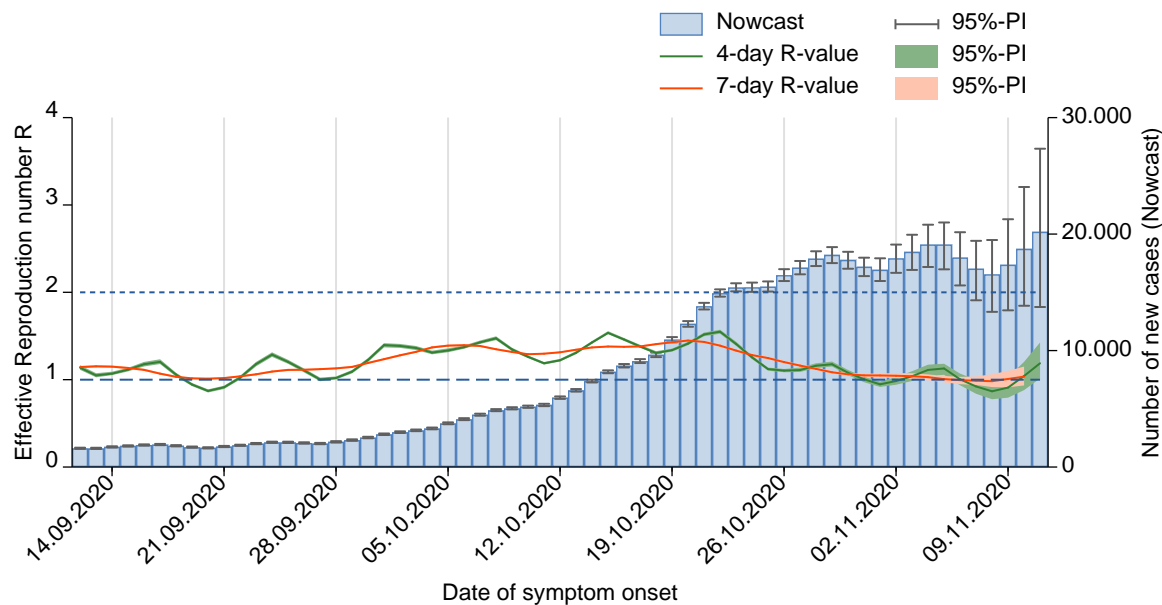

Figure 3: The estimated R-values (in green and orange) over the last 60 days, against the background of estimated number of COVID-19 cases according to illness onset (as of 15/11/2020, 12 AM, taking into account cases up to 11/11/2020).

The reported R-values have been stable well above 1 in October. Over the past few days the R-value has been fluctuating and is currently around 1. This means that, on average, each person infected with SARS-CoV-2 infects another person. As the number of infected persons is currently very high in Germany, this means that there is still a high number of new cases every day.

Note: The report is a snapshot and is continuously updated.

Sample calculations as well as an excel sheet presenting both R-values with daily updates can be found under www.rki.de/covid-19-nowcasting. A detailed description of the methodology is available at https://www.rki.de/DE/Content/Infekt/EpidBull/Archiv/2020/17/Art_02.html (Epid. Bull. 17 | 2020 from 23/04/2020).

DIVI intensive care register

The German Interdisciplinary Association for Intensive and Emergency Medicine (DIVI) has in collaboration with RKI established a registry to document the number of available intensive care beds as well as the number of COVID-19 cases treated in participating hospitals on a daily basis. Since 16/04/2020, all hospitals with intensive care beds are required to report (<https://www.intensivregister.de/#/intensivregister>).

As of 15/11/2020, a total of **1,289** hospitals or departments reported to the DIVI registry. Overall, **28,128** intensive care beds were registered, of which **21,229** (75%) are occupied, and **6,899** (25%) are currently available. The number of COVID-19 cases treated in participating hospitals is shown in Table 3.

Table 3: COVID-19 patients requiring intensive care (ICU) recorded in the DIVI register (15/11/2020, 12:15 PM).

	Number of patients	Percentage	Change to previous day*
Currently in ICU	3,385		60
- of these: with invasive mechanical ventilation	1,923	56%	47
Discharged from ICU	25,939		252
- of these: deaths	5,773	22%	79

*The interpretation of these numbers must take into account the number of reporting hospitals and therefore the number of reported patients may change from day to day. On certain days, this can explain an occasionally important decrease or increase in the cumulative number of discharged patients or deaths compared with the day before.

Risk Assessment by the RKI

In view of the recent increase in case numbers with severe disease, which have to be treated in ICUs and the increasingly tense situation in the health system the risk assessment of the RKI was adapted to the situation on 11/11/2020. The current version can be found here:
