

Information on the designation of international risk areas

Current at: 7 January 2021

New risk areas (see below “Changes since last amendment”) are effective from Saturday January 9, 2021, at 0:00 am.

Changes since last amendment:

Denmark: the Faroe Islands are considered as additional risk areas.

France: complete mainland France is considered as additional risk area.

Ireland: the complete country Ireland is considered as additional risk area.

Norway: the counties Rogaland and Trøndelag are considered as additional risk areas.

Portugal: the complete country Portugal is considered as additional risk area, including the autonomous region Madeira.

The region Päijät-Häme in Finland is no longer considered as risk area.

Classification as a risk area is the result of a joint analysis and decision-making process by the Federal Ministry of Health, the Federal Foreign Office and the Federal Ministry of the Interior, Building and Community.

The countries/regions listed below are designated as currently presenting an increased risk of infection with SARS-CoV-2. In parentheses is indicated since when an area is classified as a risk area. At the end of the page, there is a summary of countries, which have been classified as risk areas at any time during the last 10 days, but are currently NOT classified as risk areas.

Persons entering the Federal Republic of Germany, who have spent time in a risk area at any specific period within 10 days prior to entry, may be subject to quarantine under the specific quarantine ordinances issued by the competent federal state (Land).

As of November 8, 2020, as a matter of principle, foreigners entering or returning from abroad who have stayed in a risk area within the last **ten** days before entering the country are obliged to enter a **ten-day quarantine** immediately after entry. In addition, persons entering Germany must register before their arrival in Germany at <https://www.einreiseanmeldung.de>

and carry proof of registration with them on entry. After five days of quarantine at the earliest, those entering the country can be tested for SARS-CoV-2 to end the quarantine obligation with a negative test result. In order to maintain the community and economic activity, certain groups of people are exempt from the quarantine obligation. Exceptions for family reasons are also intended. If you have any questions about the respective quarantine regulations that apply to you and any possible exemptions, please contact the respective federal state. Regulations of the respective federal states are linked on the following website:

<https://www.bundesregierung.de/breg-de/themen/coronavirus/corona-bundeslaender-1745198>

Please note: The Federal Government examines, on an ongoing basis, the extent to which areas are to be classified as risk areas. As a result, this list can be modified at short notice and, above all, may be extended.

The existing travel and safety advisories by the Federal Foreign Office (<https://www.auswaertiges-amt.de/de/ReiseUndSicherheit/reise-und-sicherheitshinweise>) as well as the Federal Government's information for travellers and commuters (<https://www.bundesregierung.de/breg-de/themen/coronavirus/corona-regelungen-1735032>) still apply.

Classification as a risk area is the result of a joint analysis and decision-making process by the Federal Ministry of Health, the Federal Foreign Office and the Federal Ministry of the Interior, Building and Community. This classification as a risk area is based on a two-step assessment. Initially, it is determined in which countries/regions there were more than 50 new infections per 100,000 inhabitants in the last seven days.

In a second step, qualitative and other criteria are used to determine whether or not countries/regions that might nominally fall below this threshold could nonetheless still present an increased risk of infection. The same applies for countries/regions that might nominally fall above this threshold but do not nonetheless present an increased risk. Since the 44th calendar week, the maps of the European Centre for Disease Prevention and Control (ECDC), broken down by region, have been taken into account for the EU Member States. The map contains data on the 14-day notification rate, testing rate and test positivity. As part of the second step, the Federal Foreign Office and, where relevant, the Federal Ministry of Health and the Federal Ministry of the Interior, Building and Community, provide qualitative reports based on reporting by the local German diplomatic representations, which also covers measures taken to halt the spread of the coronavirus pandemic. Key factors in this assessment are above all the numbers of infection and the type of outbreak (local or wide-spread), testing capacities and the number of tests carried out per capita as well as the measures taken to contain the spread of infection (hygiene regulations, contact tracing, etc.). Similarly, this also takes into account individual countries where reliable information may not be readily available.
