In Croatia the counties Sibensko-kninska and Zadarska, as well as in Switzerland the canton Freiburg (Fribourg), are no longer considered risk areas.

The countries listed below are designated as currently presenting an increased risk of infection with SARS-CoV-2. In parentheses is indicated since when an area is classified as a risk area. At the end of the page, there is a summary of countries, which have been classified as risk areas at any time during the last 14 days, but are currently NOT classified as risk areas.

Persons entering the Federal Republic of Germany, who have spent time in a risk area at any specific period within 14 days prior to entry, are subject to a mandatory Covid-19 test (from 8 August 2020) and may be subject to quarantine under the specific quarantine ordinances issued by the competent federal state (Land).

Please note: The Federal Government examines, on an ongoing basis, the extent to which areas are to be classified as risk areas. As a result, this list can be modified at short notice and, above all, may be extended. Directly before embarking on your journey, please check whether you have spent time in one of these areas in the last 14 days before entering Germany. Should this be the case, you must expect to be subject to mandatory testing and quarantine.

Classification as a risk area is the result of a joint analysis and decision-making process by the Federal Ministry of Health, the Federal Foreign Office and the Federal Ministry of the Interior, Building and Community. This classification as a risk area is based on a two-step assessment. Initially, it is determined in which countries/regions there were more than 50 new infections per 100,000 inhabitants in the last seven days. In a second step, qualitative criteria are used to determine whether or not countries/regions that might nominally fall below this threshold could nonetheless still present an increased risk of infection. As part of the second step, particularly the Federal Foreign Office and, where relevant, the Federal Ministry of Health and the Federal Ministry of the Interior, Building and Community, provide qualitative reports based on reporting by the local German diplomatic representations, which also covers measures taken to halt the spread of the coronavirus pandemic. Key factors in this assessment are above all the numbers of infection and the type of outbreak (local or wide-spread), testing capacities and the number of tests carried out per capita as well as the measures taken to contain the spread of infection (hygiene regulations, contact tracing, etc.). Similarly, this also takes into account individual countries where reliable information may not be readily available.

Areas that have been risk areas at any time during the past 14 days but are currently no risk areas anymore:

- Sri Lanka (15 June - 23 September)
- Cuba (15 June - 23 September)
- Barbados (15 June - 23 September)
