

Public Health Intelligence – Capacity Building and Innovation

EIOS
EPIDEMIC INTELLIGENCE FROM OPEN SOURCES

Objectives

- 1
 - Define strategies for building PHI **capacity**
 - Strengthen PHI **capacity** in at least 3 target countries
 - Achieve sustained building/strengthening of PHI **capacity** in the target region
- 2
 - Improve **timeliness** and **quality** of detection of new potential public health threats in target countries
 - Improve **user experience** within EIOS by increasing signal-to-noise ratio
- 3
 - Foster a sustainable regional PHI **network**
 - Strengthen **regional commitment** to the EIOS initiative

Project Description

During the two-year project timeframe, the activities conducted will contribute to strengthening PHI competencies and capacity building at national, regional, and international level. Additionally, this work will contribute to identifying the training gaps and defining strategies for PHI capacity building globally.

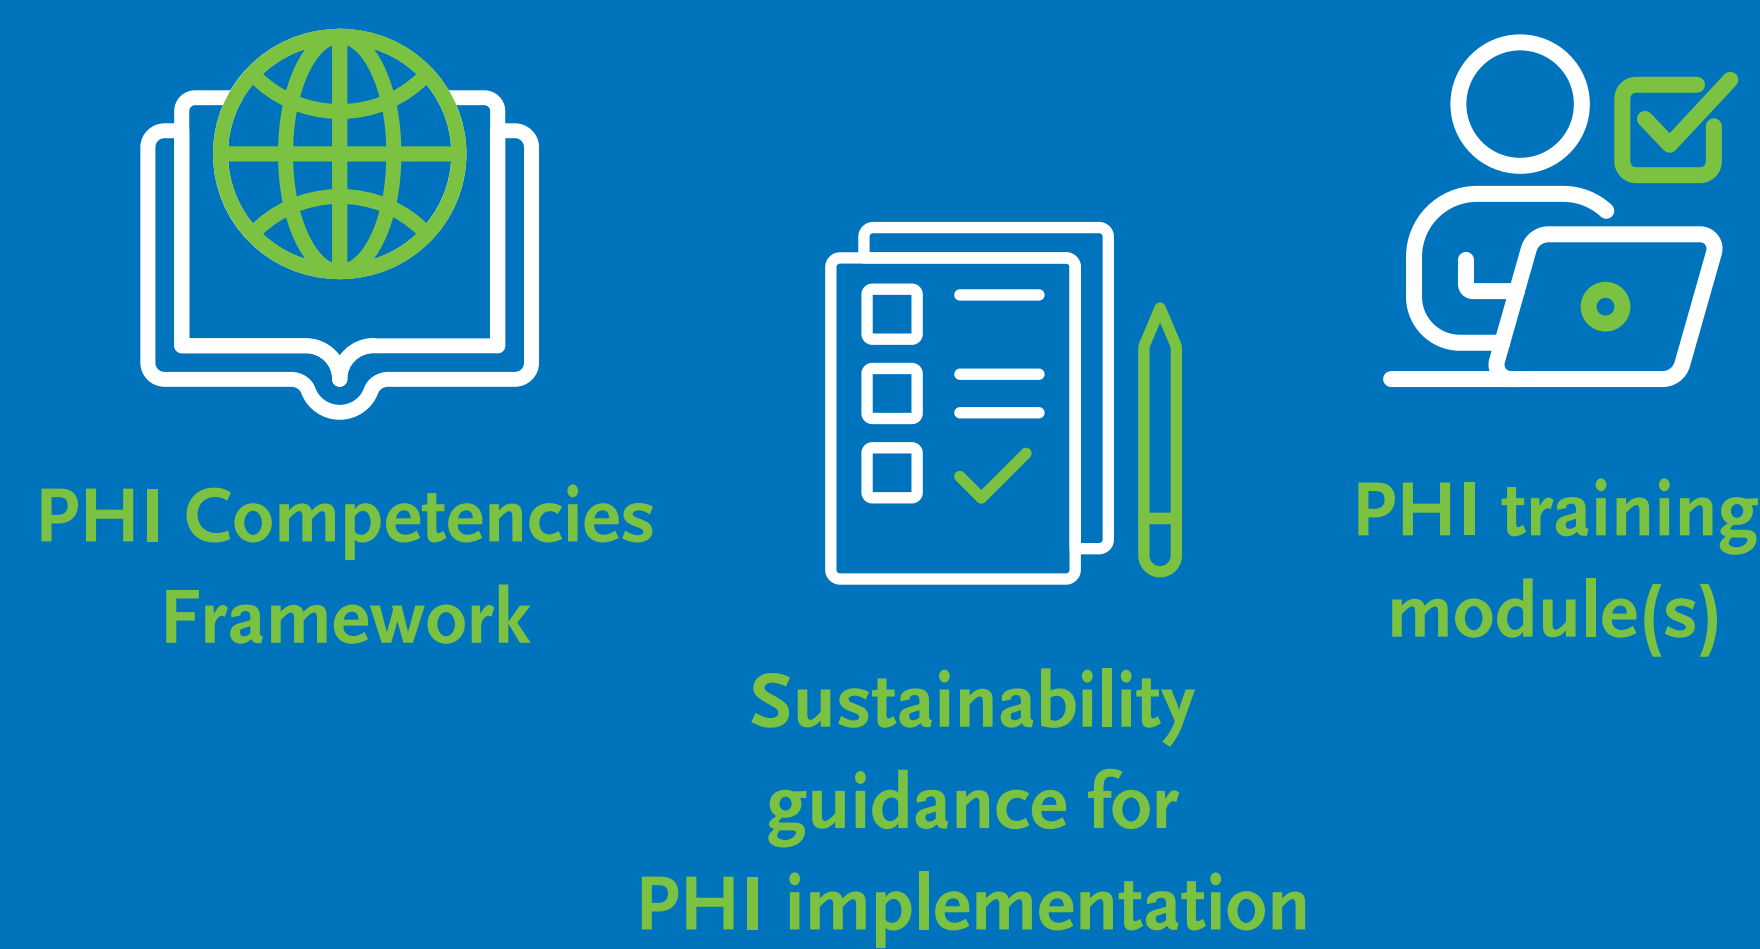

In collaboration with the relevant partners, a training module to support and improve PHI competencies will be piloted and deployed in at least three countries. The knowledge and skills acquired through the trainings and further engagement with the PHI community will have a lasting effect on improving the timeliness and quality of detection of new potential public health threats in the targeted countries and region. Whilst investing in developing skills and increasing the user base, the project will considerably contribute to further developing technical solutions within the EIOS system to support a diverse range of PHI professionals in their day-to-day tasks by providing them with more relevant signals for their work.

Furthermore, the project activities will enhance the regional PHI network and their engagement with the EIOS initiative, thus fostering better, clearer and faster interactions on a regional level.

Work Packages, Activities and Outputs

WP1

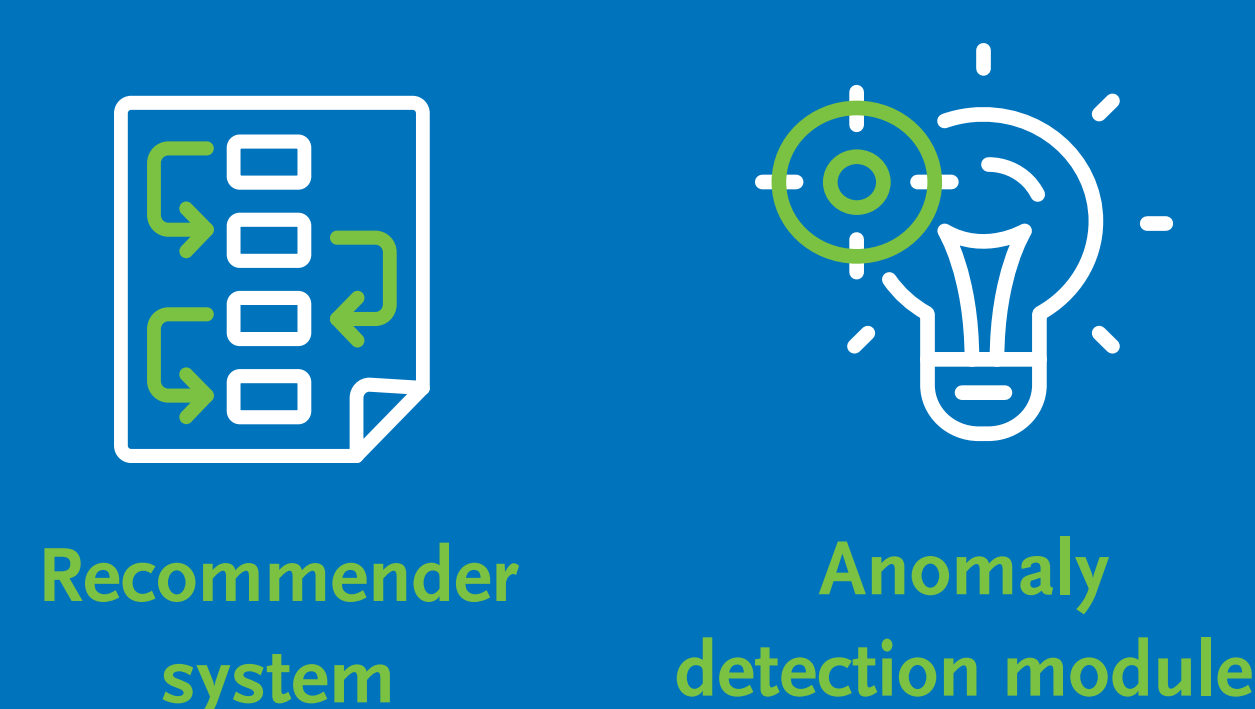

PHI Competencies

- Finalization of the WHO PHI competency framework
- Development, piloting and dissemination of PHI training module(s)
- ToT workshops for PHI trainings
- Development of a framework for PHI implementation

WP2

Signal Relevance

- EIOS: growing community, need for optimization
- Possible optimization strategies
- Different requirements

WP3

Engagement

- Organization of a regional EIOS engagement meeting
- Establishment or support of a sustainable regional PHI network
